

## **ClearSign Announces Successful Completion of Phase I Flare Installation Successful Test Results Confirmed**

SEATTLE, Sept. 21, 2016 /PRNewswire/ -- ClearSign Combustion Corporation (NASDAQ: CLIR), an emerging provider of industrial combustion technologies that help to reduce emissions and improve efficiency, today announced the completion, customer acceptance and issuance of payment for the initial phase of a multiphase project to retrofit Duplex™ technology into enclosed ground flares for a major California oil producer.

Awarded under a previously announced contract with Advanced Combustion and Process Controls, ClearSign's Duplex technology achieved environmental emissions that satisfied the most stringent air regulations within California.

The results of the testing were independently confirmed by the customer and Advanced Combustion and Process Controls, the prime contractor on the project and ClearSign's representative in Southern California. Under the existing contract, multiple units, including larger capacity units, will be delivered. The project marks the first application of ClearSign technology for the ground flare market.

"The successful application of Duplex technology to enclosed ground flares demonstrates its versatility and capabilities for reducing emissions and improving operating performance throughout a broad asset class," said Steve Pirnat, ClearSign's Chairman and CEO. "We are extremely pleased that we have satisfied the customer's demanding performance requirements."
