

## **ClearSign Receives Follow-On Project from Aera Energy** **ClearSign's Duplex™ Technology to be Deployed on OTSG Using Waste Gas**

SEATTLE, March 16, 2017 /PRNewswire/ -- [ClearSign Combustion Corporation](#) (NASDAQ: CLIR), an emerging provider of industrial combustion technologies that help reduce emissions and improve efficiency, today announced an additional order from [Aera Energy LLC](#), targeting lower emissions for units firing a combination of natural and low BTU oil field produced waste gas.

ClearSign's Duplex technology, already in use with enclosed well-head flares which use oil field waste gas exclusively, is targeting sub 5ppm NOx for the project generator, below the current regulatory emission NOx limit of 6ppm. ClearSign's Duplex retrofit technology goal is to achieve ultra low emission performance without the use of inefficient flue gas recirculation (FGR), costly reagents, or catalysts.

"We are pleased that Aera Energy has the continued confidence in ClearSign's technology to once again place an order for our Duplex technology for their OTSG units," said Steve Pirnat, Chairman and CEO of ClearSign Combustion Corporation.

### **About ClearSign Combustion Corporation**

ClearSign Combustion Corporation designs and develops products and technologies for the purpose of improving key performance characteristics of combustion systems, including emissions and operational performance, energy efficiency and overall cost-effectiveness. Our patented Duplex™, Duplex Plug & Play™ and Electrodynamic Combustion Control™ platform technologies enhance the performance of combustion systems in a broad range of markets, including the energy (upstream oil production and down-stream refining), commercial/industrial boiler, chemical, petrochemical, and power industries.
